CAREER OBJECTS

A highly motivated Computer Science graduate seeking an entry-level Software Developer role to apply my problem-solving abilities and learn from real-world software development challenges. Looking forward to contributing to a collaborative team while building reliable and impactful software solutions.

EDUCATION

B.E – Computer Science and Engineering. With CGPA 7.49 at Kongu Engineering College (2022 - 2026)	HSC at Muncipal Hr Sec School, Cuddalore With 82.5% (2022)	SSLC at Model School, Panruti With 69% (2022)
--	--	--

PROFESSIONAL EXPERIENCE

Gen AI TechnologiesMay 2025 - June 2025

- Developed a Flight Ticket Price Prediction model using Machine Learning techniques.
- Performed data preprocessing, feature engineering, and exploratory data analysis (EDA).
- Trained and evaluated machine learning models to improve prediction accuracy.
- Worked with Python, Pandas, NumPy, Scikit-learn, and Jupyter Notebook.
- Collaborated with mentors to understand the end-to-end machine learning development lifecycle.
- Documented project progress and presented model performance and findings.

PROJECTS

Doctor Appointment Management System

- Developed a full-stack web application for managing doctors, patients, and appointment scheduling.
- Implemented secure user authentication and CRUD operations for doctor and patient records.
- Designed RESTful APIs for smooth communication between the frontend, backend, and database.
- Used MySQL to store and manage appointment, doctor, and patient information efficiently.
- Technologies: React.js, Node.js, Express.js, MySQL.

E-Commerce Web Application

- Developed a responsive e-commerce website with product browsing, shopping cart, and order management features.
- Implemented user authentication and product management functionalities.
- Built RESTful APIs to connect the frontend with the backend and database.
- Designed a user-friendly interface to provide a smooth shopping experience across devices.
- React.js, Node.js, Express.js, MongoDB

Cyber Troll Detection and Severity Classification Using Graph-Based Learning and Transformer Attention

- Developed an AI-based system to detect cyber trolling and classify comments into different severity levels.
 - Used DistilBERT, Graph Convolutional Networks (GCN), and Transformer Attention to improve text classification accuracy.
 - Performed data preprocessing, model training, and performance evaluation using Python and PyTorch.
 - Achieved around 80% accuracy in classifying cyber troll comments.
 - Technologies: Python, PyTorch, DistilBERT, Torch Geometric, Scikit-learn.
-

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, SQL

Database: MongoDB, MySQL

Frontend: HTML5, CSS3, React.js, Tailwind CSS

Core Knowledge: Data Structures, Object-Oriented Programming, Rest APIs.

Backend: Node.js, Express.js

Tools: Git, Github, Figma

AREA OF INTEREST : DBMS , Web Development.

CERTIFICATION : MongoDB Associate Developer Certification – Issued by MongoDB University

RESEARCH PUBLICATION

A Robust Misuse-Based Intrusion Detection Using Deep Learning on UNSW-NB15 Dataset
IEEE International Conference, 2026

- Published an IEEE conference paper on a deep learning-based intrusion detection system using the UNSW-NB15 dataset.
 - Contributed to model development, data preprocessing, performance evaluation, and technical documentation.
 - Focused on improving intrusion detection accuracy using deep learning techniques for cybersecurity applications.
-
